## 2021

## COMPUTER SCIENCE - HONOURS

## Paper : CC-8

(Data Communication, Networking and Internet technology)
Full Marks : 50
The figures in the margin indicate full marks.
Candidates are required to give their answers in their own words as far as practicable.

Answer question no. 1 and any four from the rest.

1. Answer any five questions :
(a) Highlight the main differences between LAN and WAN.
(b) Name the different layers of TCP/IP protocol.
(c) Briefly explain how checksum is estimated.
(d) What is Network Address Translation (NAT)?
(e) What are different techniques of error detection during data transmission?
(f) What is URL?
(g) What is statistical TDM?
(h) Optical guided data transmission is more advantageous than wireless transmission. Justify your answer.
2. (a) Explain Frequency Division Multiplexing (FDM) with proper illustrations.
(b) Write short notes on QAM.
3. (a) What is channelization? Explain FDMA with example.
(b) Explain the difference between Dialup modem and ADSL.
4. (a) What is Nyquist rate of sampling?
(b) Find Nyquist rate for the signal : $m(t)=2 \sin (4 \pi t) \cos (2 \pi t)$.
(c) How SNR is related to shannon capacity?
(d) Among serial and parallel transmission which one is faster? Explain briefly with reasons. $2+3+2+3$
5. (a) Name the layers of the OSI model. Briefly state their functions.
(b) Write the functions of RARP protocol.
6. (a) What are the main differences between Router and Switch?
(b) What are the advantages and disadvantages of STAR topology?
(c) A signal received that has values of $-1,0,1$. Is this an analog or a digital signal?
7. (a) Write short notes on Mail access protocols with proper examples.
(b) What is process to process delivery? Explain with suitable example.
8. (a) Why is co-axial cable superior to twisted-pair cable?
(b) Name the advantages of optical fibre over twisted-pair and coaxial cable.
(c) What is the purpose of cladding in an optical fibre?
